AI Ethics Doc

The correct use of AI while in college:

Using AI correctly in college means treating it like a tutor. Students like me are able to ask AI to explain a hard concept, quiz them before an exam, or even check grammar. The thinking, the writing, and the final answers should still come from the student. Anytime AI helps with an assignment, that student should follow the exact course policy and be sure to cite it. I do think the correct use does depend specifically on each professor's course policy and what they allow those actions to be. One action may be allowed in one course but be prohibited in another course. Students also should verify AI and their outputs because AI does sometimes state incorrect facts without confidence.

AI response:

Yes, I agree with your paragraph! You make a good point that AI should be used as a learning tool rather than a replacement for a student's own thinking and work. I also agree that professors' policies are important because different courses may have different rules about how AI can be used. Finally, verifying AI-generated information is important because AI can sometimes provide inaccurate information. I would maybe add one more sentence about how AI should help students learn, not just help them finish assignments faster. That would reinforce your main point and make your paragraph even stronger.

The incorrect use of AI while in college:

The most common form of using AI incorrectly in college is submitting AI generated work as your own. For example, turning in an essay that AI wrote without permission or direction from a teacher or teachers assistant, and without citation. Using AI during exams, asking AI for answers on a quiz or test when outside help is again said to not be allowed. Making up sources and copying AI citations without knowing if the given sources are real or not. The problem with having easy access to AI in this day in age, is when students don't use the tool to make learning easier but instead use it to replace their own thinking. Aggies don't lie, cheat, or steal, and that does include with AI.

AI response:

Yes, I agree with your paragraph! You make strong points about academic dishonesty, especially submitting AI-generated work as your own, using AI when outside help is prohibited, and relying on sources without checking whether they are real. I also really like how you connect your argument to the Aggie Honor Code at the end because it makes the paragraph more relevant to college students at Texas A&M.
